

Security is in our DNA

SECURITY

- ✓ BankStatements is independently **designed and vetted by world-class security experts** to ensure the highest levels of data protection and security.
- ✓ All data sent to our server is **encrypted with 256-bit encryption**, secured by 2048-bit keys.
- ✓ Your customers' login **credentials are never stored**. They are securely discarded once they have been encrypted and passed to the bank.
- ✓ The service is a **one-time retrieval** – it only happens with your customers' authorisation.
- ✓ **We do not store copies** or have access to the bank statements, they are sent directly to you.
- ✓ **Secure data transmission** is available to you by POST to a secure URL with PGP encryption.

PRIVACY

- ✓ BankStatements is **Australian owned and developed** technology.
- ✓ Adherence to Australian **privacy principles and laws** is at the core of our service.
- ✓ Our servers are located in **secure Australian data centres**. No data is sent offshore.
- ✓ Your customers' **personal details are never shared** with or sold to third parties.
- ✓ Helps you meet your **AML and KYC obligations**.
